

myAir™ continues to evolve.

Shaped by what we've heard from patients, the latest refresh brings an updated visual experience and new features that give patients more ways to understand and engage with their therapy.

What are the new updates?

Refreshed myAir Score

The familiar myAir Score has an updated design and deeper insights, making it easier for patients to understand what contributed to their score.

Nightly Timeline

Nightly Timeline helps patients understand their night of therapy with minute-by-minute details and explanations of key events.

Dark Mode

Dark mode allows patients to choose their preferred viewing experience.

New myAir Icon

A new Resmed-branded myAir app icon allows for a more consistent and recognizable experience.

Therapy Control

Therapy Control gives patients more ways to manage their therapy through the myAir app. They can start and stop therapy, adjust comfort settings like ramp time and humidity, and learn what their settings mean and how to use them.

Patients with devices registered in myAir had up to **21% fewer support calls during the first year of therapy.***

21% ↓

*Based on an internal analysis of German Healthcare call interaction data, there is an association between myAir device registration and lower inbound support call volume among new patients.

myAir users are twice as likely as non-users to **achieve compliance over the first 90 days of therapy.***

x2
